ABOUT ME

"Backend Developer with **1 year of experience** in software outsourcing. Strong skills in **Python and Django** for building web applications. Experienced in creating **RESTful APIs**, integrating payment gateways (**MoMo, VN PAY**), and using **Docker** for deployment. Good knowledge of **PostgreSQL** and professional workflow with **Git Flow**. I am looking for a position to build high-quality software and help the team grow.

WORK EXPERIENCE

WEB DEVELOPER – CÔNG TY CỔ PHẦN TÀI CHÍNH CÔNG NGHỆ DRACO – 10/05/2024 – 05/01/2025 – HỒ CHÍ MINH, VIETNAM

- **Data Collection & Cleaning:** Gathered and cleaned internal company data to ensure high-quality input for chatbot training.
- **Data Formatting:** Converted unstructured data (PDFs, Docs) into structured formats (JSON, Markdown) for better AI processing.
- **Data Chunking:** Implemented data chunking strategies to break down long documents into smaller, meaningful pieces for the **RAG** system.
- **Vector Database Integration:** Handled the process of converting text data into embeddings and storing them in **Vector Databases** for fast retrieval.
- **Database Optimization:** Optimized **PostgreSQL** to store and manage raw data before the training process.
- **Chatbot Interface Development:** Designed and implemented the user interface for the internal chatbot system.

PYTHON BACKEND DEVELOPER (OUTSOURCE PROJECT) – TECHLA AI – 07/01/2025 – 01/08/2025 – HỒ CHÍ MINH, VIETNAM

Project: Automated Facebook Content Re-poster & Zalo AI Assistant

Facebook Automation System:

- **Automated Workflow:** Built a system to track and re-post content from Facebook Pages based on custom time configurations.
- **Content Management:** Developed features to manage Page lists, filter posts by interaction (likes/shares), and handle "Pending/Published/Rejected" statuses.
- **Post Processing:** Implemented logic to automatically add source links and hashtags to re-posted content.
- **Data Visualization:** Created a **Dashboard** with charts to track total posts and engagement rates by day, week, and month.

Zalo AI Assistant:

- **AI Summarization:** Developed an AI assistant that summarizes Zalo chat messages and documents (.pdf, .docx) using Python.
- **Scheduled Tasks:** Built an automated messaging service to send summary reports at specific times (11 AM, 4 PM, 9 PM).
- **Data Integrity:** Implemented logic to check for new messages and prevent duplicate summaries.

Technologies Used: Python, Django, Zalo API, Facebook Graph API, AI Summarization models, PostgreSQL.

PROJECTS

01/01/2025 – 06/06/2025

AI Career Advisor

Link github: https://github.com/quocbao2004/ai_career_advisor

Goal: Built an AI system to provide career advice and personalized learning paths.

- **AI Chatbot System:** Developed a real-time chatbot using **Gemini API** to answer user questions about career paths and skills.
- **RAG Implementation:** Built a **Retrieval-Augmented Generation (RAG)** pipeline to provide more accurate and context-aware responses.
- **Vector Database:** Integrated a **Vector Database** to efficiently store and search through large amounts of professional career data.
- **Personalized Roadmaps:** Created logic to analyze user profiles and generate step-by-step learning roadmaps for specific jobs.
- **Data Management:** Designed **PostgreSQL** schemas to store user assessment results and career history.

01/03/2026 – 05/05/2026

Student Admission Management System

Link github: https://github.com/quocbao2004/student_admission

Goal: Developed a system to manage university admissions and student grade data.

Key Features:

- **Online Payment Integration:** Integrated **VNPAY** gateway to allow students to pay admission fees online.
- **Transaction Security:** Implemented **signature validation** and handled IPN (Instant Payment Notification) to ensure secure and accurate transactions.
- **Payment Status Tracking:** Built a real-time system to update and track payment statuses (Pending/Success/Failed) for each application.
- **Advanced Filtering Logic (Lọc ảo):** Built a specialized algorithm to filter student applications based on multiple criteria like scores, priorities, and quotas.
- **Admission Statistics:** Developed a Dashboard using **Chart.js** to visualize admission trends and student demographics.
- **Grade Management:** Created a system to handle mass data entry for student grades with validation to prevent errors.

● **SKILLS**

Backend

JSON | PostgreSQL | Django | Python | Django Authentication | RESTful APIs | Research & Development

Database

SQL | PostgreSQL

Version Control

Git Flow | Github | Docker | Git

● **CERTIFICATIONS**

Toeic 600+

JLPT N5

● **EDUCATION AND TRAINING**

10/2022 – 10/2026 Ho Chi Minh, Vietnam

INFORMATION TECHNOLOGY SaiGon University of Technology

Field of study Backend Developer | **Final grade** GPA 7.29/10
